

Compsee

Company Background

Automated Data Collection & Software Applications

Who We Are

Compsee is a division of Control Solutions, Inc., which was founded as POSDATA in 1973. Compsee was acquired by Control Solutions, Inc. in 2009.

Compsee's headquarters is in Gig Harbor, Washington with its corporate technology center in Branchburg, New Jersey and its sales headquarters in Melbourne, Florida. The company has service offices in Louisville, Kentucky and Santa Fe Springs, California, and sales offices throughout the United States.

What We Do

Compsee is a leader in the application of automated data collection technologies. Our focus is the de-

sign, integration and implementation of data collection systems from the most comprehensive line of hardware, software, supplies and services available from one source. The manufacturers we represent are the leaders in their industries.

Our Markets

Compsee serves the manufacturing, distribution, warehousing and retail markets along with government, transportation, health care, construction and other service industries.

Our services can be effectively used in any industry where rapid and accurate data and retrieval are essential. Our client list includes many of the companies found in the Fortune 500 listing.

Our Products

Our product line includes the latest bar code printing, scanning, RFID & and wireless communications technologies and related supplies.

We offer a variety of portable and stationary (on-line) data collection terminals from manufacturers such as Motorola, Honeywell, Datalogic, DAP and Intermec Technologies.

Products from these suppliers include the latest forward compatible radio frequency (RF) technology for real time remote data collection with wireless networks which includes Cisco Technologies and Motorola 802.11 Wireless Ethernet.

Compsee At A Glance: Focused on a Total Solution for Your Applications and Goals

We know that it takes more than hardware and software to provide a solution. It takes commitment to understand your business and data collection needs. It takes the ability to tie together all the elements critical to solving your business problems. And it takes the expertise to integrate them with your host computer system so that they measurably increase your operating efficiency and lower your costs. That's why we are focused on customer applications. We zero in on what you want to accomplish with automated data collection and deliver a total solution – from design and installation to bringing the system up and training your people to get the most out of using it.

Compsee is fully certified to support and install all of these technologies.

We design bar code label printing systems for a wide range of label compliance and application needs.

These systems include bar code label printers and bar code verifiers from manufacturers such as Zebra and Intermec.

The hardware used in our systems is chosen for its ability to integrate seamlessly with both our application and connectivity software, so the solutions we provide can evolve as your business grows and your data collection needs change.

Our Comprehensive Planning and Integration Services

A successful data collection system cannot be created haphazardly; it requires careful planning throughout its design, installation and implementation.

To accomplish this we offer a comprehensive range of unique planning and integration services that include need assessment studies, systems, planning and definition studies, site surveys, installation services, label design and formatting services, customized operator training, and consulting services.

Our Commitment

Software

We will provide our customers with a software path using the latest industry standard technologies that are flexible, stable, predictable and cost effective.

This software platform will provide an ongoing migration path, protecting our customers against obsolescence.

Hardware

We will provide our customers with the latest industry standard technologies, protecting our customers against product obsolescence so widely recognized in the industry.

Compsee has established an amortization philosophy, with a path-forward program that extends the life of the software, as hardware offerings approach end of service status.
