Doc # AP3-BCU-110101	**Bar Code Utility – Version 2.27**

Compsee Apex III BCRDRIVER (Bar Code Driver) Utility version 2.27 provides the user the ability to append any valid standard or extended ASCII character (0 to 255) to the end of any valid scanned bar code.

A common use for this utility includes appending a Carriage Return (decimal value 13), Horizontal Tab (Decimal 9) or Line Feed (decimal 10) to any scanned bar code.

The first 32 characters of the Standard ASCII codes are Control Codes.

A Syntax example is as follows:

    BCDRIVER SFX=13

This above command will add a Carriage Return to any scanned valid bar code.

    BCDRIVER SFX=0

This command will disable the suffix.

The download file for BCDRIVER.EXE – Bar Code Driver Utility can be found at -
