Introduction

The Read Barcodes application was created and compiled using the Compsee Apex III & IV Program Generator. This software has been designed to allow the user to easily find the symbology of a barcode.

Overview and Purpose

The Read Barcodes software package is designed to collect barcode information and display for the user, the barcode data and the symbology type.

Main Screen

The Read Barcodes Main Screen is the first screen to appear on the PDT when the user starts the application software. This screen contains three pieces of information.
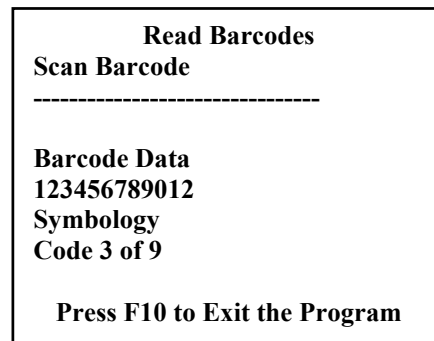

```
              Read Barcodes
Scan Barcode
-------------------------------

Barcode Data
123456789012
Symbology
Code 3 of 9

   Press F10 to Exit the Program
```

Figure 1.0 The Main Screen

The following data prompts are displayed from the Read Barcodes Screen:

- **Scan Barcode**: The scan barcode data prompt is the first line of information displayed on the Read Barcodes Screen. Once the user scans a barcode, the application will determine the symbology type and data within the barcode.

- **Barcode Data**: Each time a barcode is scanned and validated, the application software displays the data read from the barcode.

- **Symbology**: Each time a barcode is scanned and validated, the application software displays the symbology of the barcode.

The operator can press the F10 function key on the PDT to quit the current application software and return the DOS prompt or calling Program.
