## Apex III Technical Bulletin

### NEW **Version 2.0** - Program Generator

#### *Now available with Version 2.0 of the Apex III Program Generator*

In an effort to continuously improve our product, Compsee is pleased to announce Release 2.0 for the Apex III Program Generator.

The Apex III Program Generator was designed from the beginning as a rapid data collections applications development platform for creating mission critical business applications. The Apex III Program Generator is a powerful, and easy to use, Windows™-based applications development tool that allows a user to visually create data collection screens, perform sophisticated math functions and create complex program flow.

We have listened closely to our customer's input and are very proud to offer these new features and functions, most of which were requested specifically from our customers.

- Users can now insert a new procedure at any position into the procedures grid, a particularly useful function, saving a great deal of time, when editing a program.
- The "Clear a File Procedure" now provides the capability of deleting a file's contents and structure.
- The user can now easily find the record count of a file by simply selecting the newly added Process, "Total Record Count".
- The user can return the Barcode Identifier and/or the Barcode Description from a scanned input and save this information to a variable.
- The addition of a new icon on the Project Explorer Tree to easily distinguish between a Label and an Input prompt
- The addition of the "Space" (ASCII character 32) to the list of supported control characters
- The addition of a Documentation Option on the Main Menu. This feature creates a text file documenting the projects template's controls and their property settings, including all defined procedures.
- The addition of the following user definable options to the Send and Retrieve Process: Carriage Return, Line Feed, Open Port and Close Port. This provides the user control during communications and maximum control for formatting transmission data.
