Data Net supplies thousands of companies in over 25 countries with flexible, easy to configure ERP enhancement systems that include software implementation, hardware and technical customer support. DataBridge™ and Co-Log®/Open provide rapid configuration of data collection systems and deployment of the communications network necessary to link the broad family data collection devices and printers to ERP applications.

Co-Log/Open, Data Net's latest generation of data collection software, combines over sixteen years of experience with the latest technology to enable you to create powerful data collection solutions. Co-Log/Open's ease of use reduces complexity of creating robust, real-time systems while providing a framework for data collection that can quickly evolve to meet your company's needs.

Apex IV

Co-Log®/Open
Configurable Data Collection Software

Using Microsoft's ODBC technology Co-Log/Open communicates with a variety of databases and ERP systems. In addition to native database access, Co-Log/Open can communicate directly to a variety of host platforms, including Windows©, Unix or AS/400. Additionally, through its use of TCP/IP and radio frequency (IEEE 802.11b) connectivity, Co-Log/Open enables a company to leverage its existing network and support personnel.

Apex III

Co-Log/Open lets you focus on your company's unique needs instead of the intricacies of data collection hardware and software. No programming experience is required to create an exact solution that lets you enforce your business rules on the shop floor or in the warehouse. Because it is easy to use and configure, Co-Log/Open installations can be deployed rapidly and can evolve quickly and constantly, allowing for a faster return on investment.

Co-Log/Open was designed to be as easy to maintain, as it is to configure. Network diagnostics allow for control and monitoring of all devices from a single computer. Intelligent terminals reduce the load on host systems and allow for continuous operation, even in the event of network failure.

DNT 950

Co-Log/Open's flexibility extends to the data collection equipment it supports. Co-Log/Open communicates with both the Apex III and IV from Compsee.

- Easy to Program
- Handles units moving in and out of the RF envelope
- Data validation on handheld or at computer
- Software Demo Available
