PICS is a full service system integrator and software developer specializing in data collection hardware and software since 1986. We sell a complete line of data collection equipment including batch and radio frequency portables, laser, CCD and wand scanners, thermal printers, data collection terminals, labels and ribbons.

PICS insures that all equipment sold works with the software to meet the customer's requirements. PICS also offers system design, programming, installation, training and support. PICS markets inventory control software with a product called VICS2000 (Visual Inventory Control System 2000), an order processing inventory control system called FundTracker for the Fund Raising Industry, and a MaxiCode validation program called MaxCheck.

 VICS2000 is a powerful inventory control and management software package that seamlessly integrates barcode printing and scanning into inventory control. VICS2000 works with both radio frequency and batch portable scanners. The VICS2000 base package gives you the ability to receive, issue, adjust, and transfer inventory. VICS2000 also offers other modules to be able to create purchase orders, sales orders, pick tickets, pack verify, and invoice. All of these transactions can be performed using a PC, a batch portable, or a radio frequency portable.

VICS2000 Key Features

- Uses proven bar code technology to accurately receive, transfer, adjust, issue, inventory, pick, pack, and maintain inventory levels.
- Reduces the time, costs, and frequency of physical inventories and cycle counts.
- Produces barcoded pick tickets for easy picking, packing, and invoicing.
- Tracks item inventory in multiple warehouses and bin locations.
- Provides immediate access to items on hand, on order, sold, allocated, picked, packed, and invoiced.
- Allows the ability to scan verify each customer order as the order is packed.
- Inventory can be stocked in primary locations and replenished from secondary locations based on bin priority.
- Items can be scanned by UPC, item, or vendor barcode numbers.

- Point and Click interface allow seven beginner users to feel comfortable and in command.
- Prints item, warehouse, bin, pallet, and order bar code labels.
- Maintains complete ordering, receiving, adjusting, transferring, kitting, picking, and packing histories for each inventory item.
- Security is controlled by the administrator assigning add, view, edit, or delete clearance codes for each file or menu option.
- Reports can be exported to many standard formats including: ASCII, Crystal Reports, Data Interchange, Excel, HTML, Lotus, ODBC, Rich Text Format, Text, and Word for Windows.
- Single user and multiple user systems are available.
- VICS2000 is modular. Choose only the modules that you need. The modules include: Purchase Order, Order Entry, Batch Portable, and Radio Frequency Portable.
- Scanning options are available for receiving, locating, transferring, adjusting, issuing, physical inventory, picking, and packing.
